MSc Statistics

Hard Core	STH551: Design and Analysis of Experiments	No. of credits: 4
------------------	---	--------------------------

Course Outcomes:

CO1: Construct and analyse incomplete block designs, Latin square designs and Youden square designs.

CO2: Identify the effects of different factors and their interactions and analysis of factorial experiments.

CO3: Construct complete and partially confounded factorial designs and their analysis.

CO4: Able to analyse the experimental designs with missing values.

Unit-I

Gauss-Markov set-up, normal equations and least squares estimators, error and estimation spaces, Variances and Covariances of least squares estimates, estimation of error variance, least squares estimators, simultaneous estimates of linear parametric functions.

Tests of hypothesis for one and more than one linear parametric functions, Confidence intervals and regions, multiple comparison tests, simultaneous confidence intervals. (12 hrs)

Unit-II

Introduction to designed experiments, General block design information matrix (C-matrix) and its properties; connectedness, balance and orthogonality, Intra block analysis (contrast estimators, multiple comparisons and testing of linear hypothesis). (12 hrs)

Unit-III

Balanced incomplete block design (BIBD) – Definition and relations among the

parameters, Intrablock analysis. Youden square design (YSD). Intra Block Analysis of YSD
(10 hrs)

Unit-IV

General factorial experiments, factorial effects - best estimators and testing the significance of factorial effects, study of 2 and 3 level factorial experiments in randomized blocks; complete and partial confounding of 2 and 3 level symmetric factorial experiments; notion of fractional factorial experiments for factors with 2 levels.
(10 hrs)

Unit-V

Analysis of covariance for CRD and RBD designs. Missing plot techniques for RBD.
(06 hrs)
